Interaction Design Internship, Autumn

LEGO Interaction Design Team

Dear Ms. Nanna Ulrich Duedahl, Ms. Lene Laursen Zitz, and Ms. Nanna Enggaard,

As a **Full-Stack System Designer** working at the intersection of interaction design and immersive technology, I am excited to apply for the **Interaction Design Internship** (Autumn) at the LEGO Interaction Design Team. I have led a project exploring immersive play for children (*WrightHere*), using mixed reality to bridge imagination and writing story narratives. With hands-on experience in digital prototyping, I am adept at designing, developing, and improving the user interaction.

I have devoted my academic studies to designing systems that expand human creativity. For my graduation project, I developed *WrightHere*, an AI-infused 3D platform that integrates mixed reality with children's creative writing. I led the end-to-end process—from identifying latent user needs to building system architecture and high-fidelity prototypes using Figma, Arduino, Unity, and Swift. Through rapid prototyping, I explored how digital systems can expand children's imagination while preserving hands-on creativity in the writing process. Currently, I am designing a creativity support tool for choreographers that augments embodied, sensorimotor creativity in physical space with music. These works investigate how digital technology can enhance physical expression—an approach that closely aligns with LEGO's vision of enriching play across physical and digital dimensions.

Furthermore, I have worked on interactive products in real market environments. At KAI Inc., I contributed to *Mingle*, a 3D communication platform (mobile application) with customizable world-building. I designed a novel 3D emoji-combination interaction system, allowing users to express emotions vividly with avatars. As my responsibilities expanded beyond the internship, I was promoted to Chief of Staff (CoS), where I contributed to strategic planning and led product presentations at major international stages including CES 2024 and SXSW 2025. Meeting global users strengthened my desire to design interactions at scale—experiences that are not only well-crafted in prototype, but also meaningful to users. I aspire to continue creating interactions that connect product vision with real human play, and I believe LEGO provides the ideal environment to do so.

As a graduate student, I have pursued my passion for designing playful, imaginative systems that empower people. This is what draws me to LEGO. With my multidisciplinary background and multicultural perspective, I am excited to bring fresh, breakthrough ideas to the LEGO Design Team. Thank you for your time and consideration, and I would love the opportunity to discuss how my skills can support LEGO's mission.

Sincerely,

Jaeryung Chung
